PORR

Logistics as a special challenge.

A special challenge lay in the transportation of the necessary concrete to the construction site.

After all, the two project units consisted of a total of four tunnels with only three access possibilities. Due to the strict time pressure, many of the companies commissioned with the project had to work in the tunnels at the same time. This made logistics significantly more difficult. Despite these conditions and the strict time pressure, the project was carried out at an excellent level of quality and without defects.

Impressions

Image notes

1

Realisation in a short period of time.

Construction of the concrete slab in the south entrance of the Klaus tunnel.

2

Road expansion in northerly Spering

Creation of the concrete slab by hand with the help of a roller striker in the broadening area of the tunnel entrance.
