PORR

Working without traffic jams.

The construction project was implemented in various traffic stages and construction sections within only three months. In the process, traffic was hardly restricted at all. The concrete slab covers an area of 1,500 m² and is 25 cm thick. The work package also included all of the joint works, and the concrete slab being manufactured by hand. This facilitated the implementation of the project, because it allowed the construction phases to be selected much more flexibly.

Impressions

Image notes

1

Construction works without traffic jams.

The busy section of road remained open to traffic throughout the entire construction time.

2

Working by hand for more flexibility.

The installation by hand of the concrete slabs helped the project planners to have more flexibility.

3

The final touch.

Before the concrete hardens, the surface is smoothed by hand with a polishing knife, and the brushstrokes are created.
