PORR

Residential living in an attractive environment.

In contrast, the new construction of Building J was designed as a reinforced concrete column system. These columns are round in cross-section in the basement floor and square in the upper floors. The roof construction above the basement floor and upper floors, like that of the other building sections, consists of a reinforced concrete slab without roof bearers. The sections of outer wall without windows instead contain a buttressed fascia bearer. The reinforced concrete slab roofing is buttressed from the outer walls by this fascia bearer.

Impressions

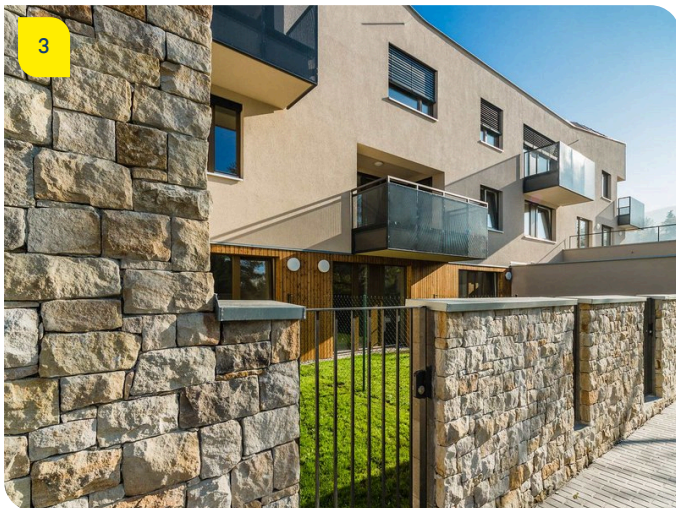

Image notes

1

Quality of life in an attractive environment.

DOB Centrum also offers residents the use of a ballroom and wellness rooms.

2

Residential well-being.

The building blends harmoniously into the landscape.

3

Enjoying nature and sunshine.

4

Relaxed living for all requirements.

Natural stone walls lend the residential complex an original character.

The ground-floor apartments are intended for senior residents.
