# Shaping Drammen's city-landscape

allowing users to cross it by car, bicycle or on foot.

Works will start with the removal of the existing bridge and breaking up the foundations in the water. Then, works on the new river foundations and supports will be carried out on two floating platforms, each measuring 20x20m. Afterwards, the steel parts will be installed before the project will finally be rounded off with a complete surface design. The parts for the steel bridge will be transported by barge from PORR's new steel construction production plant across the sea to Norway – as transport by water is an effective and climate-friendly alternative to land transport.

## Impressions

## Image notes

1

Computer model showing Drammen bybru at night.

As one of the main features of Drammen, the bridge is an important factor for the city of 100,000.

2

A bridge to last for 100 years.

The bridge will be an essential part of everyday life of Drammen and its inhabitants in the years to come.

3

Demolition of old bridge in full swing!

Work to demolish the old bridge is underway to make way for the new one.

4

Work in progress.

Construction works started in 2022, the opening of the new City Bridge is scheduled for 2025.
