Austrian Alpine Salmon from modern fish breeding facility.

Fresh water required is sourced from a well on site and provides for optimum conditions for the salmon thanks to its excellent quality and low temperature. Feeding takes place via an automated pipe system in the individual tanks.

With its 16 circular tanks and two snaking flow-through tanks, the facility meets the respective requirements of the different breeding phases and provides optimum conditions for the successful breeding of fish.

Impressions

Image notes

1

Förolach aquaculture facility.

The fish breeding firm features a total of 16 circular tanks for salmon.
