Modernisation of the tram in Reșița

As part of Lot 2, the specialists modernised a further 4.63 km of double tram tracks with a total of 9,363 km of infrastructure, superstructure, points and crossings, depot lines as well as the line network and rectifier substations. Nine passenger transport stations were built or renovated along the route. The greening of the tram tracks and the planting of 341 trees created a further 15,821 m² of green space. This construction phase also included the adaptation of the surrounding road infrastructure with carriageway, pavements, kerbs, bollards, etc. On the Doman and Libertății bridges, a separate lane was built for public transport and for emergency vehicles, each with a length of 60 and 160 metres respectively. The project is rounded off with the creation of 5.13 km of cycle paths.

After completion of the work in December 2024, the tram service in Reșița was able to resume after a break of almost 13 years. A great achievement by the project team, which has made an important contribution to optimising public transport as part of the urban mobility project and thus to a greener and more sustainable future for the residents of Reșița.

Impressions

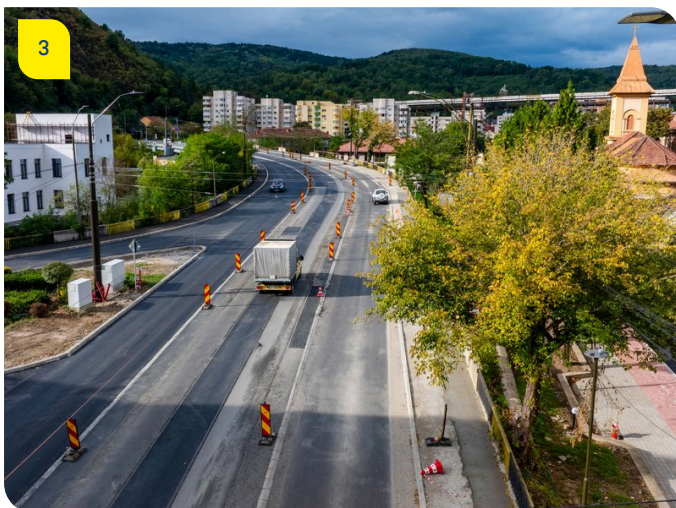

Image notes

1

For a greener future

2

Modern and functional

Photovoltaic modules on the roofs of the stations ensure independence from the national power grid.

The newly built tram stations are partially covered and offer sufficient space.

3 Road renovation as part of the modernisation project

As part of this major project, the road infrastructure adjacent to the tram network was also brought up to date.
