PSE S.A. Data Center

All the underground elements, including, above all, the fibre-optic networks that will be used to e.g. control the transmission of electricity, are also of key significance. Among other things, the Area Power Dispatch and the Regional Supervision Centre will be located on the project site.

The design of the building puts great emphasis on the use of environmentally friendly solutions - the facility will be energy efficient, using rainwater harvesting technologies as well as on-roof photovoltaic panels.
