Flood protection with modern look.

The execution of the project began with a pile foundation, on which the two abutments were installed. The concrete construction was made possible by certain hydro-engineering measures and the installation of a shoring scaffold. The road construction and the finishing of the road surface marked the completion of this successful project.

Impressions

Image notes

1

Bridge into the future.

On 26 October 2011, the new Blatten bridge was inaugurated and opened to traffic.

2

Road bridge with hanging trusses.

The new bridge is supported by steel and concrete hanging trusses and spans a distance of 60 metres.

3

Back to nature.

In contrast to the old, low bridge, the new construction has been designed with a view to flood protection and rehabilitation measures on the Kleine Emme.
