# A unique urban landmark

The ground floor area is characterised by so-called racks, everyone of which was individually executed in facing concrete as a V-shaped support with discs. The most stunning and complex part of the building is the high wing projecting in the direction of the A23 inner-city motorway. It consists of two protruding, five-storey steel framework discs with slanting pendulum supports.

On the first part of the building's handover date in late November 2003, 20,000m<sup>2</sup> of office space had been completed and all HVACR systems in the other parts of the building had been successfully installed. The data processing centres were handed over together with the remaining construction stages in late February 2004. The high wing was handed over in late May. Once final work had been completed, the overall project could be completed in September.

## Impressions

## Image notes

1

T-Center St. Marx Vienna.

Its size and distinctiveness make the T-Center become an urban landmark.

2

T-Center St. Marx Vienna.

Architektur Consult, Domenig & Eisenköck's award-winning architectural design.

3

T-Center St. Marx Wien.

At its time of construction, the T-Center ranked among Austria's largest structures.
