

Wolf 2 – Concrete slab feeder tunnel of the Brenner base tunnel

Data and facts

Company	ÖBA – Österreichische Betondecken Ausbau GmbH
Type	Concrete slab construction
Principal	Swietelsky Tunnelbau GmbH & Co. KG

[Project report online](#)

www.porr-group.com

PORR

Top performance under difficult conditions.

In addition, the works had to be carried out in a single layer execution with a very high slab thickness of 30 cm. All that in a short construction time and under strict terms by the customer.

Impressions

Image notes

1

Difficult surroundings as a challenge.

The 3.3 km long stretch had to be concreted in only a few weeks in a very restricted space.

2

Millimetre work under the mountain.

In particular the positioning of the paver unit in the tunnel was precision work.

3

Logistics in the deep.

The concrete had to be transported into the tunnel with dumper trucks and quickly processed there.
